

# **Year 1**

## **Maths**

### **Friday 10/7/2020**

# Lesson Aims

To apply my knowledge of subtraction to play a game.

# Starter

Write **4** different number sentences where the answer is **5**

***Can you think of 2 addition and 2 subtraction?***

Example:  $4 + 1 = 5$        $6 - 1 = 5$

## Activity:

- **Today you are going to play a Subtraction board game.**
- **You will each need a counter/ cube** (*or any small object at home*) **and a dice** (*or you could write the numbers from 1-6 on pieces of paper and turn them face down before choosing one*)
- **Take turns to throw the dice and solve the subtraction number sentences that you land on (you can use your number line to help)**
- **If you do not get the answer correct first time, miss a turn. First one to finish is the winner!**
- (*Home learners: there are 3 different boards on the pdf. Please try to the second or third one*)

# Finally:

Lisa is not sure if she needs to subtract **5** or **6** from **20** to end up with **14**.

Can you help her?
