

Jaguars

What do they eat?

Did you know that Jaguars are carnivores? They have extremely sharp teeth so they can rip through their prey. Interestingly, they enjoy eating a variety of animals including tapirs, turtles and deer.

What do they look like?

Amazingly, Jaguars are the 3rd largest cat on earth. They have beautiful spots. The spots help them to be camouflaged as they stalk their prey.

Other interesting facts:

You may not know that you can find a jaguar in rainforests, deserts and in grasslands. Interestingly, jaguars have very strong legs that they use for swimming. Jaguars can live up to 15 years.
