The notes have the values of £5, £10 and £20 (from smallest to greatest).

Lina and Sam have the same amount of money – they both have £20.

Any explanation that shows an understanding that Ben has more money as he has £20 but Amina only has £15. Children should also show understanding that the total value depends on what the notes add up to – not how many notes there are or the number on one note.

Accept any correct answers that children give.
