

Yesterday we revised the names
of 2D shapes.

Can you remember them all?

Grown up to describe the shape for child to find and name. e.g. I am thinking of a shape with 4 straight sides, they are all the same length.

What is my shape? (A square)

What shape is being described to you?

We are going to make a picture from 2d shapes.
Either cut out some shapes and stick them
together to make a picture or draw round some 2d
shapes to make a picture.
